

19 October 2017

Thai exports continued surging at 12.2%YOY, reaching historic high	
Key point	Thailand's export value expanded 12.2%YOY in September, posing strong growth in almost all product categories and key markets. Gold exports, in particular, grew 243%YOY, with the export growth rate at 7.9%YOY without gold. Oil and related products, such as refined fuel, as well as rubber and rubber products expanded by 53%YOY and 42% YOY respectively. Meanwhile, in the manufacturing sector, computer equipment and parts exports increased by more than 9%YOY in line with more demand for industrial products thanks to a better global economic outlook. Overall, Thailand's exports saw a 9.3%YOY growth in the first nine months of the year.
	Import value also continued expanding, at 9.7%YOY, led by imports of computer equipment and parts, which grew 18.8%YOY in line with more exports in the same product category. Continuing recovery is also seen in the imports of capital goods (excluding airplanes and ships), with a 3.8%YOY growth rate, reflecting a better outlook for domestic investment. Overall, Thailand's import value grew by more than 14.8%YOY in the first nine months of the year.
Implication	EIC expects export value growth to be 7.0% and 3.3% YOY in 2017 and 2018 respectively. the price of oil which remains low and some commodity prices that are likely to contract may depress export price and exporters' income in 2018. However, the economies of major trading partners such as the US, Eurozone, Japan, and China are likely to continue expanding in 2018, boosting confidence in trade and investment and thereby maintaining demand for key industrial products. If global trade and the manufacturing sector continue their upward trend, export growth may also beat the forecast.
	EIC forecasts import value will expand 13% and 7% YOY in 2017 and 2018 respectively. Import figures will depend on demand for raw materials and capital goods, which is likely to rise thanks to Thailand's better domestic investment outlook. However, low oil price may dampen fuel products imports.
